In-person courses at our headquarters, near Edinburgh Airport; and Aberdeen.

**Alternatively, attend one of our regular online courses.**

Our acclaimed Virtual Classroom version is custom-built for desktop learning.

**Private staff training at a time and place to suit you.**

Arrange a course exclusively for groups of 3 or more, in-house or online.

# Learn to plan, prepare for, conduct, and report on internal audits of Environmental Management Systems.

We've simplified the subject of auditing your organisation's Environmental Management System, to help you learn (faster) how to conduct them (excellently).

The beauty of our approach is we use trainers that audit a broad spectrum of sectors when they're not in the classroom, meaning you can fully relate personally to the examples we illustrate.

This brings the theory to life and is one of many reasons SQMC-trained auditors stand out from the crowd.

Overview

# How will I, or my employer, reap the rewards from my training?

Benefits

We pride ourselves in producing positive, enthusiastic auditors; and we award successful participants with a well-respected ISO 14001 Internal Auditor qualification which demonstrates a high standard of training – beneficial for particular HR developmental requirements.

You'll have the confidence to go back to work and use your new skills and knowledge to add value to your current Environmental Management System (EMS), audit it, or perhaps even design and implement a new system from the ground up. An effective and efficient EMS can have a dramatic effect on your organisation's bottom line, and we want to prepare you to play a key role in this, gaining yourself kudos as an environmental professional.

# What will I learn?

Participants in this interactive ISO 14001 Internal Auditor course will experience practical audit scenarios based on dynamic case studies. We help you try out auditing protocols and techniques in a safe and comfortable environment.

In only two days you can learn, understand and appreciate all of the following:

- The Requirements of an Environmental Management System, using the latest versions of ISO 14001 as your yardstick.

- The principles, methodology, preparation, and performance of the quality audit (to universal best practice set by the ISO 19,011 Guidelines - part of our complimentary Standards pack worth £386).

- The key to selecting the audit sample, and deciding the best questions to ask (with tips as to the most effective phrasing of your questions).

- How to prepare the findings and statements for a Corrective Action Report.

- Master the art of straightforward Audit Reporting.

- A look at Corrective & Preventive Action, the follow-up process, and then surveillance.

Syllabus

★★★★★

## Trusted

"The tutors created a unique, open atmosphere, thoroughly engaging. I left the course with the confidence to put my new skills immediately into practice."

# A global standard in auditor certification.

SQMC began in 1989 as an ancillary unit within the Management Sciences faculties of one of the United Kingdom's leading universities, providing short auditing courses accredited by the International Register of Certificated Auditors (IRCA). Within four years we were awarded Centre of Excellence status by the Institute of Quality Assurance (now called the Chartered Quality Institute).

SQMC has since evolved into an independent, private training supplier to individual students and multinational corporations in 88+ countries.

**SQMC**
